PROFESSIONAL SUMMARY

AWS Certified Cloud Practitioner and final-year Computer Science and Design student with hands-on experience deploying and troubleshooting cloud-hosted applications on AWS EC2. Skilled in Linux administration, networking fundamentals, containerization with Docker, and building CI/CD pipelines with Jenkins. Comfortable working across the stack from provisioning infrastructure and configuring security groups to diagnosing service, container, and connectivity issues using Linux command-line tools. Seeking a Cloud Support/Cloud Associate/DevOps internship to apply practical cloud operations and troubleshooting skills.

TECHNICAL SKILLS

Cloud (AWS): EC2, IAM, VPC, S3, EBS, EFS, Security Groups, NACLs, CloudWatch, Route 53, Load Balancer (ELB), Auto Scaling, RDS, Lambda, Step Functions

Linux: Ubuntu, Amazon Linux, Linux administration, file management, users & permissions, process management, systemd/systemctl, SSH, log analysis, disk & memory troubleshooting, Bash scripting

Networking: TCP/IP, OSI model, IPv4, public/private IP, subnets, CIDR, DNS, HTTP/HTTPS, TCP vs UDP, ports, routing, NAT, Security Groups, NACLs, network troubleshooting

DevOps & Tools: Docker, Docker Compose, Jenkins (Declarative Pipelines), Git, GitHub, Docker Hub, CI/CD, basic Terraform

Programming: Python, Java, C, SQL, Bash

Web / Application: Django, Nginx, MySQL

PROJECTS

Personal Notes Application — Cloud Deployment & CI/CD

GitHub: github.com/Suraj-dot-wq/Personal-Notes-App

AWS EC2, Linux, Docker, Docker Compose, Jenkins, Nginx, Django, MySQL, GitHub, Docker Hub

- Deployed a containerized Django application on an AWS EC2 instance, configuring public/private IP access and SSH-based instance management.
- Containerized the application and its database service using Docker and Docker Compose, and configured Nginx as a web server/reverse proxy to route incoming traffic.
- Built a Jenkins Declarative CI/CD pipeline covering source-code checkout from GitHub, Docker image build, image push to Docker Hub, and automated deployment to EC2.
- Configured AWS Security Groups to control inbound/outbound access to the application and database services, restricting traffic to required ports only.
- Diagnosed and resolved container failures, database connectivity issues, port conflicts, and service outages using systemctl, journalctl, ss, curl, df, docker ps, docker logs, and docker inspect.
- Managed environment configuration and service dependencies between the Django app and MySQL container to ensure reliable startup order and connectivity.
- Used Git and GitHub for version control and source-code management throughout development, and Docker Hub as the container image registry for deployment.
- Verified end-to-end application availability post-deployment, confirming service health, port accessibility, and network reachability on the EC2 instance.

CERTIFICATION

AWS Certified Cloud Practitioner — Amazon Web Services

EDUCATION

B.E., Computer Science and Design

Atria Institute of Technology, Bengaluru (VTU) | 2023 – 2027 | CGPA: 8.0/10

AI / AUTOMATION (ADDITIONAL)

- Practical experience designing AI-powered automation workflows and building AI agents using Python, integrating APIs and tools to automate multi-step tasks.
- Applied Python-based scripting to streamline repetitive tasks, reflecting the same automation mindset used in CI/CD pipeline design.
